

## **Securicon, LLC - Senior Web Application Security Engineer/Consultant**

**Position Title:** Senior Web Application Security Engineer

**Location:** Country: United States  
State: Virginia  
City: Alexandria

**Description:** Securicon, LLC has an immediate opening for a Senior Web Application Security Consultant its Alexandria, Virginia office. The successful candidate will conduct application and network security assessments either independently or as part of a larger assessment team.

Successful candidates will enjoy analyzing software designs and implementations from a security perspective. The majority of work time will be spent performing security audits, risk analysis, application-level vulnerability testing and security code-reviews.

The position will be responsible for communicating recommendations to clients in verbal and written format. The successful candidate will maintain up-to-date knowledge of security threats, countermeasures, security tools and network technologies with a focus on web application security. The position will be required to develop and maintain client relationships and occasionally assist in the sales process.

### **Responsibilities:**

- Perform web application vulnerability assessments and penetration tests, as well as other client work related to Securicon's security professional services. This may also include code review projects, network security assessments, server configuration reviews, firewall policy reviews and other security consulting.
- Analyze the results of engagements to determine vulnerabilities and risks within client networks, systems and applications.
- Maintain technical proficiency including the sharing of technical knowledge, enhancing report and deliverable templates and improving the overall methodology for conducting application assessments.
- Identify and implement improvements in existing processes and procedures.
- Develop and produce high-quality written deliverables for clients.
- Must be able to travel to client sites to perform certain services. Estimate 30-40% travel during peak times, lower other times.

### **Requirements – Must Have:**

- Experience working alone or on small teams for technical security projects.
- Experience performing web application penetration tests, network penetration tests, server configuration reviews, firewall policy reviews.
- Strong computer/network security background.
- Strong writing and presentation skills.
- Self-starter with the ability to work independently.
- Ability to work well in a team setting.

**Securicon, LLC - Senior Web Application Security Engineer/Consultant**

- Must be authorized to work in the U.S and able to successfully pass a background investigation.

**Preferred:**

- Industry Certifications a plus.
- Security knowledge/experience with one or more of the following technologies:
  - PHP, .NET, ASP, ColdFusion, Java, SQL
- Degree in Information Security, Computer Science, MIS or related field.
