FULFILLING NEEDS WITH KNOW-HOW

At Securicon, our ultimate goal is to serve as a trusted extension of our customer's information security team. Although we often fulfill this objective through assessments and penetration tests, sometimes our customers need more extensive, personalized assistance.

We developed our Staff Augmentation services to meet those needs, giving our customers the ability to strengthen their teams with technical cybersecurity expertise and specialty security knowledge.

Securicon can fill staffing needs for many activities and ventures, such as:

- Large implementation projects
- Product and technology evaluations
- Security architecture design work
- Vulnerability remediation management

INTELLIGENT, SPECIALIZED STAFFING

Whether you are working on a smart-grid design and implementation project or simply need an expert security engineer to help with a business application redesign, Securicon can help.

We understand that every customer is unique, so we begin the staff-augmentation process by identifying requirements and defining internal gaps. Securicon's skilled team members are ready to tackle any challenge. We can provide you with the talent your organization needs, for as long as you need it.

Could your information security team use a little help?

Learn more about Securicon's expert solutions by giving us a call at 571-253-6565 or email us at sales@securicon.com.
