NEUTRALIZING SECURITY RISKS

In 2014, the Department of Defense (DoD) introduced the Risk Management Framework (RMF) to help federal agencies better manage the many inherent risks associated with operating an information system. The Framework enables all organizations - regardless of size, cyber security sophistication, or level of risk - to apply a disciplined and structured process that integrates information security and risk management into the development of the entire life cycle of a system.

RMF steps were designed to secure information systems in accordance with the security practices that work effectively today. The National Institute of Standards and Technology (NIST) has created a roadmap that details guidance on RMF implementation, security controls, and categorization.

Securicon's team is well-versed in the unique RMF needs and requirements of each agency, including:

- Security Planning & Documentation - Based on RMF steps 1-3b, Security Planning and Documentation services ensure adequate security controls are incorporated into the design of the system through logic, reasoning, and a comprehensive understanding of the technical aspects of the system.

- Security Assessments - Based on RMF steps 4-4b, Securicon's Security Controls Assessment ensures that the system's controls have been implemented and that they are effective in protecting the system and its sensitive data.

- Continuous Monitoring - As a central role in the RMF process, Continuous Monitoring provides organizations with near real-time insight into risk management. Securicon complements existing program capabilities to ensure comprehensive system protection and compliance.

ABOVE AND BEYOND

Securicon's team of federal experts understand that confidentiality, integrity, and availability are crucial to the daily operations of government agencies. In today's tumultuous digital environment, agencies who act defensively serve as easy targets for criminals looking to damage America's interests. To stay ahead, forward-looking policies and procedures must be designed and implemented that keep the agency's mission in mind.

Information Security Solutions

FEDERAL SECURITY SERVICES

Securicon strives not only to meet the requirements and standards of practice set forth in the RMF, but to exceed them by implementing a compliance program that allows for agency-specific initiatives. By maintaining a proactive approach, our federal customers can incorporate creative initiatives while in accordance with regulatory mandates, keeping their organizations flexible in their attempts to remain ahead of any emerging threats.

Put the industry's brightest minds to work in your RMF process.
