

FEDERAL SECURITY SERVICES: SECURITY PROGRAM DEVELOPMENT/SUPPORT

PROACTIVELY ALIGNING SECURITY EFFORTS

In the current climate of global unrest, fueled by the increasingly-looming specter of digital warfare, information security must become the primary concern for every agency. As the threat constantly evolves, it is critical to stay ahead and abreast of latest security protocols and federal laws, standards, and guidelines.

The key to reaching consistent and lasting success involves coordinating your Information Security Program with your organizational mission. To do this, you must create a clear and actionable map of how your security program fits amidst the realities of your business model.

Proactively-aligned Information Security Programs should encompass areas such as:

- System, Data, Asset Identification
- System Access Control
- Computer and Network Management
- System Development Life Cycle
- System Configuration Management
- Privacy and Data Protection
- Incident Response
- Business Continuity Planning and Disaster Recovery Planning

TECHNICAL, TACTICAL, AND STRATEGIC SUPPORT

If your organization lacks the right people or technology to develop the processes and systems needed, Securicon's expert consultants can provide advice and support at the Chief Information Officer (CIO), Chief Information Security Officer (CISO), Systems Development, and Systems Operations levels. Our services range from creating vulnerability management programs to developing organization-wide security policies, and include every incremental step in-between.

With years of experience in the Federal government space, we can ensure that your entire Information Security Program - whether it's in its infancy or in development - works seamlessly and efficiently. Securicon's engineering team develops comprehensive and customized plans specifically tailored to your agency's needs and within your desired timeframes. The current size and scope of your organization is taken into account, as well as its projected future growth and reach.

Our team provides technical and strategic knowledge based on our insight into the data security landscape of today and tomorrow. Securicon's customers rest easy knowing that their Information Security Programs are both proactive and well-informed.

Does your agency need help with its information security efforts?
